

ABSTRACT

A laminate of an air permeation preventive layer and  
5 adhesive layer provided with an air permeation preventive  
layer comprising a thermoplastic elastomer composition  
containing a thermoplastic resin as a continuous phase  
and a rubber composition dispersed therein as a dispersed  
phase and arranged on one surface of the air permeation  
preventive layer, an adhesive composition layer having a  
10 thickness of 100 µm or less, a self tack of less than 5N  
and a tack to an unvulcanized diene-based rubber or 5N or  
more, containing 100 parts by weight of a thermoplastic  
elastomer containing 50 parts by weight or more of an  
epoxy-modified styrene-butadiene-based block copolymer so  
15 that a total of 30 to 200 parts by weight of a terpene  
resin and an aromatically modified terpene resin having a  
weight average molecular weight Mw of 1000 or less and a  
softening point of 60 to 120°C, 0.1 to 3 parts by weight  
of an internal mold release agent and 0.1 to 2 parts by  
20 weight of an organic peroxide.
